# Project Energy Efficiency HVAC Air Systems in a Residential House

Script

Prof. Manuel Ruiz de Adana

UNIVERSIDAD DE CORDOBA

## CONTENTS

1. INTRODUCTION .....	1
2. OBJECTIVES .....	1
3. METHODOLOGY .....	1
4. DESCRIPTION OF THE RESIDENTIAL HOUSE .....	2

## 1. INTRODUCTION

Buildings are responsible for 40% of energy consumption and 36% of CO<sub>2</sub> emissions in the EU. Students enrolled in VIPSKILLS Course have to develop skills related with the energy efficiency in buildings. These skills are related to energy efficiency in HVAC air systems and skills related to simulation of HVAC energy systems in residential houses.

This document present a case study where students have to apply energy efficiency skills to reduce the energy consumption in a residential house.

## 2. OBJECTIVES

The student has to apply skills and competences related to Energy Efficiency in Residential Houses. Three main objectives are proposed:

- Analyze energy efficiency of HVAC air systems.
- Calculate primary Energy Consumption of different HVAC air systems in a residential house, both for heating and cooling.
- Estimate CO<sub>2</sub> emissions related with different HVAC air systems in a residential house.

## 3. METHODOLOGY

To achieve the proposed objectives the student has to apply a methodology based on this workflow:

- Analyze the geometrical and constructive characteristics of the proposed residential house.
- Identify zones of the residential house to be heated or cooled.
- Analyze the climatic zone where the residential house is located.
- Analyze different HVAC air systems commercially available. Select the at least three different systems for a residential house.
- Model the selected HVAC air systems in an energy simulation tool (HULC) and simulate the HVAC air system in an annual base.
- Analyze the annual results in terms of energy demand, primary energy consumption and CO<sub>2</sub> emissions.
- Apply energy efficiency strategies to reduce energy consumption and CO<sub>2</sub> associated emissions.
- Simulate optimized HVAC air systems solutions.
- Analyze and compare the energy results to select the best HVAC air system option.
